

Swab Collection Station

Role Description

This person will:

- ✓ Prepare extraction tubes with buffer solution
- ✓ Label the extraction tube
- ✓ Perform a deep nasal swab
- ✓ Place the swab in the labelled extraction tube
- ✓ Mix the specimen in the extraction tube
- ✓ Insert extraction tube into tube rack
- ✓ Direct participant to the specimen testing station

Personal Protective Equipment

- Medical Mask
- Eye Protection
- Gown
- Gloves

Cleaning & Disinfecting

- Beginning and end of day:
 - The table where extraction tubes are prepared with buffer solution
- After each participant has been at the station:
 - The table where specimen collection is occurring
 - Chairs used by participants

Quality Control

- Check that the test kits and buffer solution are not expired.
- Do not mix buffer solution of different lot numbers together.
- Do not store test kits in direct sunlight.

When leaving the sample collection station, the participant will have with them:

A plastic transport container + consent form
+ 1 label + "What Happens Next" flyer
